Glenn Colusa Fish Screen

See attached copies of May 16, 1968 agreement with the Glenn Colusa I.D. and our memo of August 13, 1982 to file on subject.

We request Attorney General review of agreement as to District's responsibility to provide bypass water. Due to District's lack of channel maintenance, there has been no positive flow past the screen in the July-August 1982 period.

Normal District operation is to dredge the channel leading from the Sacramento River to their pumps in March-April. If they dredge to meet our needs, to what degree can they charge the cost to the Department? It costs about \$1,000 per day to operate the dredge and the work could take from ten to twenty days to complete.

A determination is needed prior to January 1983.
