Glenn-Colusa Fish Screen

When our section was asked (directed) to build a rotary screen for the Glenn-Colusa installation in Region 2, I felt that you and your crew were best able to complete the project at that time. I obviously made a good choice as you produced a screen of exceptional quality well before the time deadline. I would hope that the people in the finance section realize the many thousands of dollars you saved for the Department in lieu of a private contractor. Also, that it takes decent equipment to complete successful projects such as this.

I would like to express my appreciation to you and your crew for doing such a fine job and continuing the high quality of workmanship you have always shown.

Philip G. Warner
